

Finance Crew: AI-Powered Financial Analysis

A CrewAI system for market analysis: agents that pull data, develop a strategy, and separately assess the risk of running it.

august 9, 2024 · Projects

a crewai system for market analysis: agents that pull financial data, work a strategy up against it, and assess the risk of running it.

the useful idea is the separation between the agent that proposes and the agent that assesses. a system that only proposes always sounds confident, because a fluent argument for a trade and a good trade come out of the same machinery. giving risk assessment its own step, with its own context and no stake in the proposal, is a cheap correction for that.

it is a study in multi-agent design, not financial advice, and i would treat any number it produces as a prompt for your own analysis rather than a conclusion.
